SUMMARY

Three years on Oracle Siebel CRM across four enterprise accounts — **Mitsubishi Fuso, Airtel, Hero and Voltas** — covering configuration, workflow, EAI integration, production monitoring and delivery ownership. Alongside that I design and ship AI systems of my own: a grounded policy assistant with cited answers and enterprise SSO, a live SaaS product with paying customers, and a voice booking agent. I work where AI meets the systems that already run a business.

AI & PRODUCT WORK

HR Policy Assistant LIVE 2026

Grounded retrieval over a consulting firm's official HR policy documents. Every answer cites its source document; questions outside the corpus are declined by design rather than answered speculatively. Access restricted to company accounts via Microsoft Entra SSO.
Node.js • retrieval with source citation • Microsoft Entra SSO • Render

Dhobi Dash LIVE • 7 PAYING CUSTOMERS Aug 2025 – present

Order management SaaS for dry-cleaning businesses — customer lookup by phone, sub-30-second order creation, status lifecycle, and partial payments with business rules enforced at the data layer. Wrote the full PRD (market sizing, personas, journeys, field specs), then ran build and go-to-market myself. **First customer closed within a week of build; seven shops on monthly retainers since.**
Product discovery • PRD ownership • GTM • web application

Siebel TDD Generator LIVE 2026

Converts a Siebel change request and object list into structured, schema-driven technical design documents, replacing hours of repetitive formatting per CR.
Node.js • schema-driven generation • Fly.io • tdd-generator.fly.dev

AI Service Booking Agent IN DEVELOPMENT 2026

Voice agent for vehicle service centres. A deterministic state machine in code drives the flow; the LLM only classifies one utterance into a small JSON object. No customer data reaches the model, keeping on-premise deployment viable, and capacity-guarded writes prevent overbooking at the database layer.
Node • Express • SQLite (Postgres-portable) • LLM classification layer

EXPERIENCE

Cubastion Consulting — Gurugram, India Oct 2023 – present

Senior Associate Consultant (Aug 2025 – present) • Associate Consultant (Mar 2024 – Aug 2025) • Graduate Engineering Trainee (Oct 2023 – Mar 2024)

Voltas — AMS & change request team Apr 2026 – present

- Built **voltasmon**, production monitoring across eight Siebel component groups on a Kubernetes estate — per-node CPU, memory, disk, JVM heap and component health, with inbound SOAP and REST calls reported as successful-against-total, so integration degradation surfaces as a moving ratio rather than a ticket hours later.
- Automated franchisee payout (FPO) generation — a **five-hour manual cycle run twice monthly across ~1,300 franchisees**, feeding a downstream SAP batch — down to a single report verified each morning.

Hero — lead data integration Dec 2025 – Mar 2026

- Moved a **100,000-record-per-day** LeadSquared feed off the Siebel business layer and onto the SIEBELEXT extension schema, replacing roughly **10,000 daily EAI invocations with a single nightly job**. Validation shifted upstream to compensate for bypassing business-layer logic. Zero reported issues since production release.

Airtel — order capture & discounting Dec 2024 – Nov 2025

- Built the real-time discount integration on order capture: REST request/response transformation, staging tables, and the validation layer guaranteeing order data integrity before anything reaches fulfilment and billing. Contributed to a **17% client revenue uplift**.
- Delivered 20+ change requests, 10+ workflows automating customer onboarding, and 8+ Open UI customisations (PR/PM, JavaScript) improving page load ~15%. Resolved 60+ production defects at **>95% SLA adherence**.

Mitsubishi Fuso — dealer & service platform Oct 2023 – Nov 2024

- Sales and service modules across **200+ dealerships and 2,500+ service centres**. Delivered 35+ change requests and configured 25+ applets, views and business components covering dealer and vehicle lifecycle, with no critical production issues.
- Built the DocuSign integration using outbound web services, integration objects and workflows — **contract turnaround from five days to six hours**, 95% user adoption within three months, 10% lower cost per document.
- Root-caused 130+ production incidents, cutting recurring issues ~30%, and built the original Siebel monitoring tool later ported to Voltas.

TECHNICAL SKILLS

AI	Grounded retrieval with citation • deterministic state machines • LLM classification • refusal design • on-premise constraints
SIEBEL CRM	Configuration • Workflow • EAI & integration objects • eScript • Open UI (PR/PM) • Order Management & pricing • extension schemas
BACKEND	Node.js • Express • REST & SOAP • WebSockets • WebRTC • API design • auth & RBAC • Docker • shell scripting
DATA	Oracle SQL & PL/SQL • MySQL • MongoDB • SQLite • schema design • indexing & query performance • Redis
FRONTEND	React • Next.js • Redux • TypeScript • Tailwind CSS
PRODUCT	Discovery & user research • PRDs • roadmapping • stakeholder management • UAT & release coordination • Jira, Figma

EDUCATION & RECOGNITION

EDUCATION	B.Tech, Electronics & Communication — Maharaja Agrasen Institute of Technology, GGSIP University, 2023 • CGPA 8.8 / 10
RECOGNITION	Diamond Award 2024, Cubastion Consulting — contribution and innovation • AI for Product Management, Pendo (certified)
